

Considerations to Take When Making Plastics for an Industrial Setting

Use the worksheet below to think through the high-level considerations for plastics in an industrial setting:

Is the equipment going to be inside or outside?

What chemicals will it be exposed to?

Does the material need a flammability rating?

Are there any electrical performance needs? (i.e. conduct or insulate electricity)

What is the desired life expectancy of the product?

Does it need any special agency approvals?

Is cost an important factor for you?

What is the potential abuse that the product might undertake?

When you're ready to discuss your project, give us a call at (330) 786-3000.
